- Current Challenges
- Proposed Methodology
- Conclusion

2. **Introduction**

The Jimdo Site Page (JSP) is a platform for creating and managing websites. It is known for its user-friendly interface and drag-and-drop features. In this paper, we aim to explore the current challenges faced by JSP users and propose a methodology to address these issues.

3. **Literature and Related Work on JSPs**

Several studies have been conducted on JSPs, focusing on user satisfaction, customization, and personalization. These studies highlight the importance of user-friendly interfaces and customization options in enhancing user experience.

4. **Current Challenges**

- Difficulty in customizing designs
- Lack of advanced features for professional users
- Limited support for developers

5. **Proposed Methodology**

Our proposed methodology involves the integration of advanced features, improved user interface, and better support systems to address the current challenges.

6. **Conclusion**

We believe that our proposed methodology will significantly improve the user experience and overcome the current challenges faced by JSP users. Further research is needed to validate these findings.
